

Nox Home Sleep Testing Service

Diagnostic Accuracy and Precision. On Demand

The **Nox Home Sleep Testing Service** gives your practice the ability to scale access to diagnostics—without sacrificing the clinical quality that sleep medicine demands. Built on the trusted **Nox T3® system**, this service delivers real physiological data, AI-enhanced scoring, and streamlined logistics from start to finish.

Who It's For

- » Sleep labs scaling without device limitations, enabling flexible testing beyond inventory constraints.
- » Sleep clinics extending diagnostics beyond the lab without compromising accuracy.
- » Health systems serving diverse or remote populations with consistent quality of care.
- » Clinicians seeking flow-based HSAT that delivers more conclusive results in complex cases.

Why Nox HST Service?

Real Data, Real Confidence:

Powered by the latest Nox T3 system featuring calibrated dual-belt RIP, Nox Flow™, plus snore, audio, position, and actigraphy—for precise airflow measurement and a comprehensive clinical view.

Cost Management:

Pricing structure that supports predictable budgeting and cost management as you scale your services.

End-to-End Logistics:

Includes test scheduling, kit delivery, patient support to enhance the patient experience.

AI-Enhanced Scoring:

As part of the service, Nox BodySleep™¹, available via FDA-cleared Noxturnal Web on the Nox Connect platform, enables EEG-free sleep staging and arousal detection using RIP—enhancing HSAT interpretation and clinical confidence.

Empowered Operations:

Streamline administrative tasks so your team can focus on patient care, not coordination.

On Demand Scalability:

Scale testing without being restricted by the number of devices in your inventory.

Cloud-Based Workflow:

Secure data transfer and review in Noxturnal Web through the Nox Connect platform for full visibility and clinical control.

Whether your goal is to increase patient access, reduce operational overhead, or modernize your workflow, the Nox HST Service provides diagnostic clarity, workflow efficiency, and clinical confidence—on your terms.
