

Software, Firmware and Manual Updates

Noxturnal 7.2 Release Now Available

Noxturnal 7.2 is here, bringing powerful new features and workflow enhancements to help clinicians and scorers work more efficiently and confidently.

Key Software Updates:

Improved Titration Management: New titration tools give you a clearer overview and greater control – including PAP traces on the recording results page, oxygen titration support, manual titration support, and full TxLink2 compatibility.

Hypoxic Burden: A novel metric quantifying oxidative stress and cardiovascular risk – now integrated directly in the Recording Results and can be added to reports.

Event Visibility in Wake: Choose to hide or gray out events that occur during wake periods for cleaner, more efficient scoring.

Improved Single-Click Scoring: Streamline your workflow with customizable single-click scoring, making event marking faster and more intuitive.

Customizable Parameter Overview: Customize which parameters you see – now includes Hypoxic Burden, AHI lateral, AHI supine, AHI REM, AHI NREM, CAI, and RDI for more clinically meaningful insights.

Sentec tCOM+ Integration: Support for the new Sentec tCOM+ device for in-lab recording.

Numerous bug fixes, including PAP table refinement.

Firmware & Manual Updates

Updated firmware for Nox T3s and Nox A1s (v3.1.2.2868) with pairing improvements, stability fixes, and the option to turn on/off the successful study indicator.

This release includes updated manuals the Nox T3s and A1s, now conveniently available on the Nox Medical support website instead of embedded in the software.

Note: This release should not be used with Nox Connect. We recommend using the previous version for full compatibility.
